## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The Information Disclosure Statement (IDS) received on February 12, 2004 has been considered in full by the Examiner, however the IDS received on January 31, 2006 has been **considered in part** because the references 5,271,038, GB 2304000 and EP 11808851 have been already cited in the IDS of February 12, 2004 which are considered by the Examiner. The initialed copies (two copies) of the IDSs are attached wit this correspondence.

### ***Priority***

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Specification***

3. The abstract of the disclosure is objected to because the abstract of the disclosure is in the PCT application rather than on a separate sheet at the end of the disclosure. Correction is required. See MPEP § 608.01(b).

### ***Claim Rejections - 35 USC § 101***

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Art Unit: 2611

Claims 25-48 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claimed subject invention is not limited to practical application. Viewed as a whole, the claimed invention is merely putting the samples on ascending order, setting a reference set; forming a threshold, multiplying, comparing the set of elements having a greatest value and forming an acceptable absolute value set for the corresponding sample set. It does not impart any practical application to the received signal in the telecommunication system.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US patent Publication US 2002/0015459 to Happonen et al, US patent numbers 6,011,430, 6,246,732, 6,385,261, and 6,665,516 to Kim, Kobayashi et al., Tsuji et al., Tsuji et al. respectively disclose a receiver having means for reducing impulse noise.
